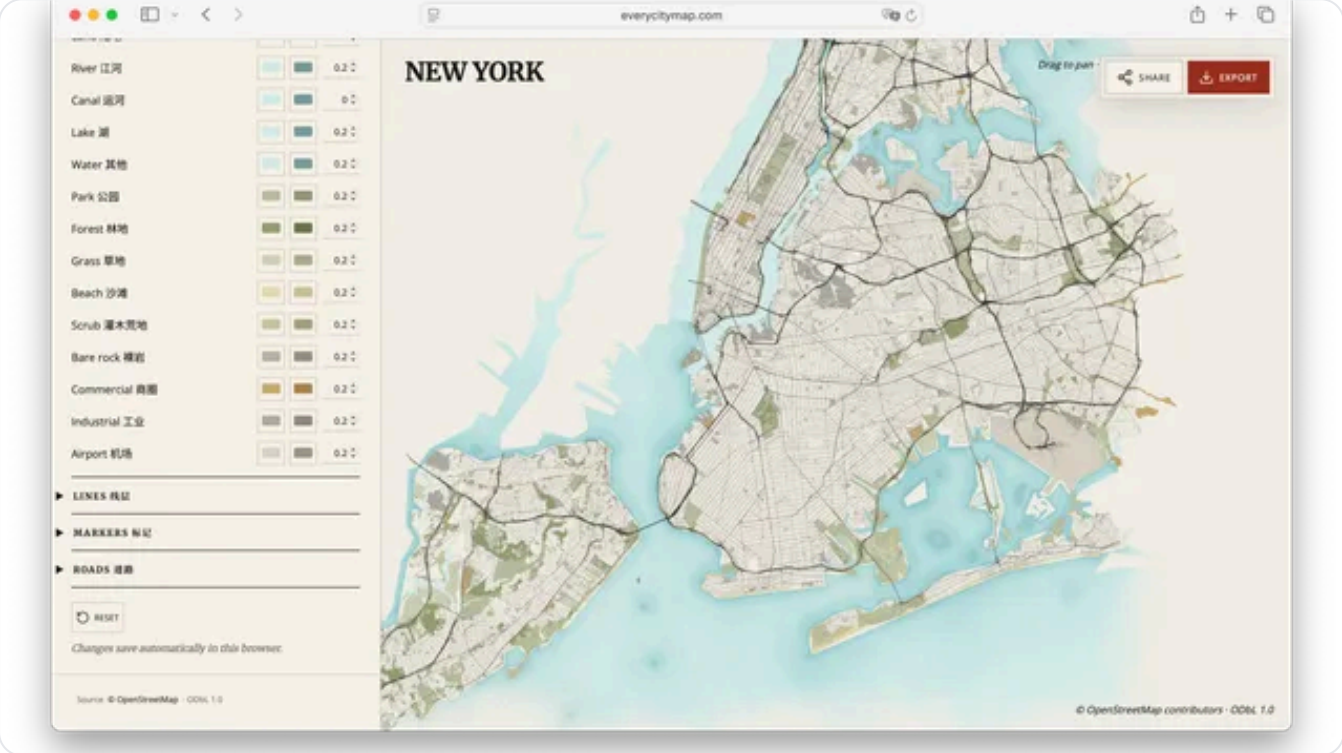
EveryCityMap

Create custom city maps from real places worldwide, then style roads, water, labels, colors, and layers before sharing or exporting a free PNG.



About

EveryCityMap is a custom city map maker for turning real places into polished, shareable artwork. It lets you start from a curated city, change the visual style, and export a free PNG without creating an account, which makes it useful for quick designs, social posts, and printable wall pieces.

What is EveryCityMap

EveryCityMap is a custom city map maker built around real places rather than generic templates. It uses prepared maps for 500 curated cities and lets you restyle the same location in different ways, so the geography stays accurate while the look changes. The

site positions itself as a map studio for screens, stories, and paper, with a browser-based flow that works before signup.

It focuses on city art and cartographic design rather than turn-by-turn navigation or GIS editing. The interface highlights themes such as Atlas, Metro, Ink, Paper, and Night, and it also shows example moods for cities like New York, London, Paris, Dubai, Beijing, Tokyo, and Shanghai.

Key features

500 curated cities: the library is presented as 500 prepared city maps and growing, with browsing by city name, continent, and country.

Real-map customization: you can adjust roads, water, labels, colors, and layers while keeping the underlying city intact.

Theme presets: visible style options include Atlas, Metro, Ink, Paper, and Night, plus a demo that shows how one city can look in multiple moods.

Share and export options: the product offers a shareable map page or branded card, a free PNG export up to 2160 pixels, and a paid 4096-pixel HD export with wallpapers.

No account required for basic use: the site says you can browse cities, edit themes, share a map page, and download the free PNG without signing in.

Attribution-aware map data: the editor and output keep OpenStreetMap attribution visible, and the map artwork is based on OpenStreetMap contributor data under ODbL 1.0.

How to use it

Choose a city. Search by name or browse the collection of prepared maps.

Open the studio. The editor loads with the full city rather than a cropped box, which is useful when you want a complete urban footprint.

Style the map. Pick a theme first, then refine the appearance of roads, water, labels, colors, and visible layers.

Preview the result. The interface is designed to stay usable while you work, so you can keep adjusting before exporting.

Share or save. Publish a public map page, generate a branded card, or save a free PNG for local use.

Upgrade if needed. The paid HD export unlocks larger artwork and wallpapers, while production print options require additional validation.

Who it is for

EveryCityMap is a fit for people who need a **city map design tool** rather than a navigation app.

Designers who want city artwork for posters, framing, or client mockups.

Creators and marketers who need a distinctive location graphic for posts, campaigns, or landing pages.

Event organizers who want a city-specific visual for invitations, venue guides, or announcements.

Anyone decorating a space who wants a map print based on a real place they care about.

People who compare map styles and want to see how one city changes across different visual themes.

Because the tool starts from real cities, it is better for location-based visuals than for abstract diagramming or route planning. The site also makes city requests available through email, which suggests the catalog can expand beyond the current 500-city set.

What to know before you use it

EveryCityMap is useful, but it has clear limits that matter before you rely on it for final output.

The free export is size-limited. The site lists a free PNG at up to 2160 pixels; the 4096-pixel option is tied to the one-time HD export.

Account access is partial. You do not need an account for browsing, editing, sharing, or the free PNG, but paid exports and regeneration access require sign-in.

It is not a full map database you control. The map artwork is generated from OpenStreetMap contributor data, and the company says it does not sell the

It does not keep a permanent copy of your exported image. If you need archival storage, save your own file or use the email delivery option where applicable.

Print workflows have conditions. Production Print Edition becomes available only after 300 DPI validation, so official print output is not automatic.

Use official sources when accuracy is critical. For legal, engineering, or compliance work, verify against the underlying OpenStreetMap data or other authoritative sources rather than treating the styled artwork as a source of record.

For people who want a city-focused visual maker with fast customization and a free download path, EveryCityMap is a practical way to create a polished map graphic from a real place.
